Direct Submission
Submitted (02-NOV-2001) Production Sequencing Facility, DOE Genome Institute, 2800 Mitchell Drive, Walnut Creek, CA 945
On Nov 2, 2001 this Sequence version replaced gi:7689976.
Sequence Quality Assessment:
This entry has been annotated with sequence quality estimates computed by the Phrap assembly program.
All manually edited bases have been reduced to quality estimates above 40 are expected to have less than I error in 10,000 bp.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ctectectggcacagaccacetgcetectgctettcatcateceggccagggccetea etctcccggccagggccctcatcatectcccggccagggccctcatcatccccggccagggccctcatcatcatcatcatcaggccagggcccaggcccaggcccaca

This entry has been annotated with sequence quality estimates computed by the Phrap assembly program.
All manually edited bases have been reduced to quality levels above 40 are expected to have less the error in 10,000 bp.
Base-by-base quality values are not generally visib. GenBank flat file format but are available as part of this entry's ASN.1 file.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Length

Consensus quality: 140723 bases at least Q40
Consensus quality: 148960 bases at least Q30
Consensus quality: 151290 bases at least Q20
Consensus quality: 151290 bases at least Q20
Estimated insert size: 98000; pulse field gel estimation
Estimated insert size: 157572; sum-of-contigs estimation
Quality coverage: 7.39 in Q20 bases; pulse field gel estimation.

* NOTE: This is a 'working draft' sequence. It currently
consists of 16 contigs. The true order of the pieces

* is not known and their order in this sequence record is

* arbitrary. Gaps between the contigs are represented as

* runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence

* NOTE: This is a 'working draft' sequence. It currently

* consists of 17 contigs. The true order of the pieces

* is not known and their order in this sequence record is

* arbitrary. Gaps between the contigs are represented as

* runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence

/note="Organ: lung; Vector: pT7T3D-Pac (Pharmacia) with modified polylinker; 1st strand cDNA was prepared from pooled lung tumor tissue, and was then primed with a No-oligo(dT) primer. Double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of the modified pT7T3 vector. Library went through one round of normalization. Library constructed by Bento Soares and Fatima Bonaldo. "
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          000

CDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Science Laboratory in Riken Genomic Sciences Center and Genome Science Laboratory in Riken Division of Experimental Animal Research in Riken contributed to prepare mouse tissues. First strand cDNA was primed with a primer prepared by using trehalose thermo-activated reverse transcriptase and subsequently enriched for full-length by cap-trapper. CDNA went through one round of normalization to Rot = 5.0 and subher adapter GAGAGAGAGATCATATAATAAATACCCCCCCCCC 3/). CDNA was cleaved with XDI and SSTI. Cloning sites, 5' end: XDI; 3' end: SSTI.

//lab_host="E. Coli strain XL10-Gold, T1-resistant, F-"
//note="Vector: PWD42nv; Purified genomic DNA from M.
musculus C57BL/6J (male) was obtained from the Jackson
Laboratory Mouse DNA Resource
(http://www.jax.org/resources/documents/dnares/). The DNA
was hydrodynamically sheared by repeated passage through a
0.005 inch orifice at constant velocity. The sheared DNA
was blunt end-repaired with T4 DNA polymerase and T4
polynucleotide kinase. Adaptor oligonucleotides were
ligated to the blunt ends in high molar excess. The
adaptored DNA was purified and size-selected for a 9.5 to
10.5 kb range using preparative agarose gel
electrophoresis. Vector DNA was prepared from a derivative
of pWD42 (gi|4732114|gb|AF129072.1), a copy-number
inducible derivative of plasmid R1. The vector was ligated
with adaptors complementary to the insert adaptors and
                                                                                                                                                                                                                                                                                                                                                                                   03-OCT-2000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            \Pi
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          c.,
